<https://mangul-lab-ju.github.io/>

1. To be safe can you say 100+ publications not 180
2. To be in line with the MCB group naming, let's do "Pioneering Computational genomics" – not Biology
3. Since number of lab members will be changing all the time let's better give a number of alumni let's say 50+
4. For <https://mangul-lab-ju.github.io/news/phd-positions-computational-immunogenomics/> make text exactly as PDF (Anna created) so there is a link to the google form where people can apply
5. The same here <https://mangul-lab-ju.github.io/news/postdoc-position-mangul-group/> exact text from PDF Ana created and link to google form not official announcement since it will disappear in a few days . Also what means M/F male? Female? If so– not sure it is necessary
6. For **Featured Publications, please take screenshots of the original journal web pages, not NCBI. Also, for the author list, can you make sure my name is visible?**
Currently it is not

Shaopeng Liu, Judith Rodríguez, Viorel Munteanu, Cynthia Ronkowski, Nitesh Kumar Sharma et al.

Nature Reviews Methods Primers (2025)

Maybe like this where my name is visible

Towards a decentralized future for open-science databases

Large-scale biological data repositories, particularly when deployed as single, non-mirrored instances or governed within narrow contexts, face structural vulnerabilities, from cyberattacks to funding disruptions. We propose a hybrid framework that integrates federated and decentralized models to ensure the resilience, sustainability and FAIR/CARE stewardship of scientific data as a global public good.

Gaurav Sharma, Viorel Munteanu ... Serghei Mangul

We need to find a way to make sure papers are updated for example if preprint is published we only need to list preprint

For example here

This is already a paper

Selected Publications

preprint

SARS-CoV-2 Wastewater Genomic Surveillance: Approaches, Challenges, and Opportunities

Viorel Munteanu, Michael A. Saldana, Dreifuss, David, Wenhao O. Ouyang, Ferdous, Jannatul, Mohebbi, Fatemeh, Schlueter, Jessica, Dumitru Ciorbă, Viorel Bostan, Victor Gordeev, Su, Justin Maine, Nadiia Kasianchuk, Nitesh Kumar Sharma, Sergey Knyazev, Eva Aßmann, Lobiuc, Andrei, Covasa, Mihai, Crandall, Keith A., Nicholas C. Wu, Christopher E. Mason, Braden Tierney, Alexander G. Lucaci, Ophoff, Roel A., Gibas, Cynthia, Piotr Rzymiski, Pavel Skums, Solo-Gabriele, Helena, Niko, Beerenwinkel, Alex Zelikovsky, Martin Hölzer, Adam L. Smith, Serghei Mangul

arXiv (Cornell University) (2023)

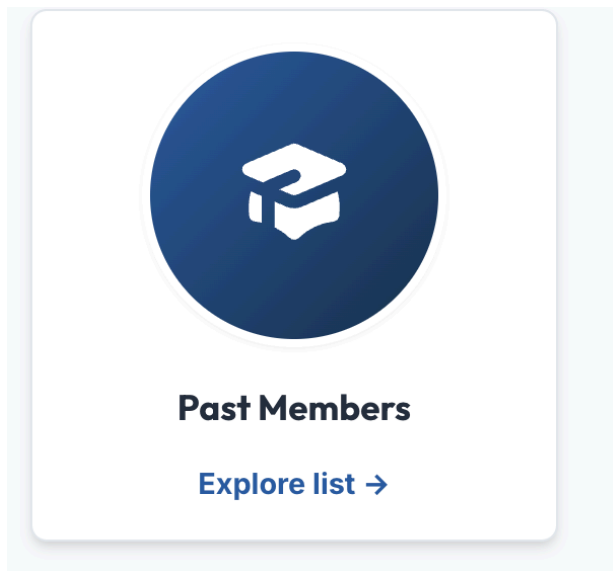

Not preprint

7. Update by Bio

Dr. Serghei Mangul is an Associate Professor and the incoming Director of the Małopolska Centre of Biotechnology (MCB) at Jagiellonian University in Kraków. He specializes in designing and applying novel data-driven computational approaches to accelerate the integration of omics and biomedical data into translational research and education, with a deep commitment to advancing the principles of reproducibility, data sharing, and software usability. Previously, Dr. Mangul served as an Assistant Professor of Bioinformatics at the University of Southern California and as Director of Challenges and Benchmarking at Sage Bionetworks. As a member of the National Library of Medicine (NLM) Board of Regents Working Group on the Sequence Read Archive (SRA) Strategic Transformation, he works to accelerate scientific discovery through large-scale data reuse. Dr. Mangul earned his Ph.D. in Bioinformatics from Georgia State University and a B.Sc. in Applied Mathematics from Moldova State University, and completed his postdoctoral training in computational genomics with Prof. Eskin at UCLA. He is the recipient of the NSF CAREER Award, the Fulbright U.S. Scholar

Program award, and the ISCB Honorable Mention Award for Sustainability. Beyond his research, Dr. Mangul is a dedicated mentor and educator, having served the NIH AIM-AHEAD Leadership Fellowship and the NCATS Training Program in Advanced Data Analysis, and is a passionate advocate for making bioinformatics education accessible to all.

Instead of

Say Alumni

Team photo links to old USC lab image

new

The team photo on the homepage pulls from `mangul-lab-usc.github.io/images/team/IMG-3719.jpg` — an external USC domain. This could break if the USC site goes down. Upload the image to the JU repo directly.

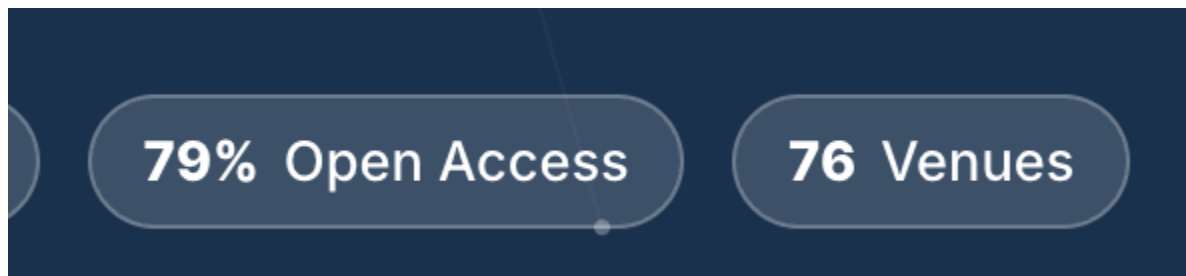

Research page: citation count stat (12,468) should be verified and kept current

new

The citations figure is a hardcoded number. Consider either linking to a live Google Scholar pull or noting the date it was last updated so visitors know it's not real-time.

Let's find a way to connect this to Google scholar to take number from there

Also remove

Less urgent

Let's find a way not to have preprints which were published see example below

Packaging and containerization of computational methods

Mohammed Alser, Brendan Lawlor, Richard J. Abdill, Sharon Waymost, Ram Ayyala, Neha Rajkumar, Nathan LaPierre, [Jaqueline Brito](#), André M. Ribeiro-dos-Santos, Nour Almadhoun et al.

Published in: **NATURE PROTOCOLS**

Abstract: Methods for analyzing the full complement of a biomolecule type, e.g., proteomics or metabolomics, generate large amounts of complex data. The software tools used to analyze omics data have reshaped the landscape of modern biology and become an essential component of biomedical research. These tools are them...

Packaging, containerization, and virtualization of computational omics methods: Advances, challenges, and opportunities

Mohammed Alser, Sharon Waymost, Ram Ayyala, Brendan Lawlor, Richard J. Abdill, Neha Rajkumar, Nathan LaPierre, [Jaqueline Brito](#), Andre M. Ribeiro-dos-Santos, Can Firtina et al.

Published in: **ARXIV (CORNELL UNIVERSITY)**

Abstract: Omics software tools have reshaped the landscape of modern biology and become an essential component of biomedical research. The increasing dependence of biomedical scientists on these powerful tools creates a need for easier installation and greater usability. Packaging, virtualization, and containerization ...

"Erratum" and "Correction" entries appear in the main publication list

[new](#)

Errata (e.g., "Author Correction: Profiling immunoglobulin...", "Corrigendum to: Recommendations...") appear alongside regular articles. These should be hidden from the public list or clearly marked so they don't appear to pad the count.

Team page: Serghei listed under "Principal Investigators" (plural) but is the only PI

[new](#)

Section heading says "Principal Investigators" — change to "Principal Investigator" (singular) to be accurate.
