

Postdoc Positions in Computational Immunogenomics

Malopolska Centre of Biotechnology (MCB), Jagiellonian University – Kraków, Poland

We invite **highly motivated postdoctoral researchers** to apply for assistant professor positions at the **Malopolska Centre of Biotechnology (MCB)**, a leading research institute of the [Jagiellonian University](#), one of Europe's most prestigious universities.

➤ Why Kraków?

Kraków is one of the leading academic centres in Central Europe, offering access to internationally recognized universities and a dynamic, interdisciplinary research environment. It provides strong opportunities for scientific development through [national](#) and [European](#) funding schemes and active participation in international collaborations. The city combines a high quality of life with relatively low living costs. In addition, Kraków offers a vibrant international community, rich [cultural](#) scene, and excellent connectivity within Europe.

➤ The Institution

Founded in **1364**, the **Jagiellonian University** is one of Europe's oldest universities, renowned for academic excellence and an international outlook. **MCB** represents its modern scientific frontier—a state-of-the-art research institute equipped with cutting-edge technologies and outstanding research infrastructure. Located in a modern campus, MCB provides an international, interdisciplinary, supportive, and friendly environment designed to foster innovation, collaboration, and scientific independence.

➤ The Project

Candidates will join a computational genomics project focused on the **development of robust and scalable bioinformatics tools and databases** to analyse adaptive immune receptor repertoires (AIRR) at population scale. The research addresses critical gaps in immunogenomics by developing methods to identify population-specific immune gene variation from large-scale sequencing data (RNA-seq, WGS), contributing to global efforts to reduce health disparities.

➤ Candidate Profile

We are looking for candidates with:

- A strong background in **computational biology, bioinformatics, computer science, or applied mathematics**
- Experience or strong interest in **NGS data analysis**
- Motivation, independence, and curiosity to work on impactful research
- Commitment to **reproducible science** and open, public-facing tools

➤ What We Offer

- Fully funded academic position with institutional benefits
- An internationally visible research environment
- Mentoring by a **leading scientist in the field**
- Access to world-class infrastructure and expertise
- Excellent training and career development opportunities
- Competitive living conditions in one of Europe's most attractive cities

📍 **Location:** Kraków, Poland

🏢 **Institution:** Malopolska Centre of Biotechnology, Jagiellonian University

👤 **Supervisor:** [Prof. Serghei Mangul](#)
